AI Clinical Diagnostic Report

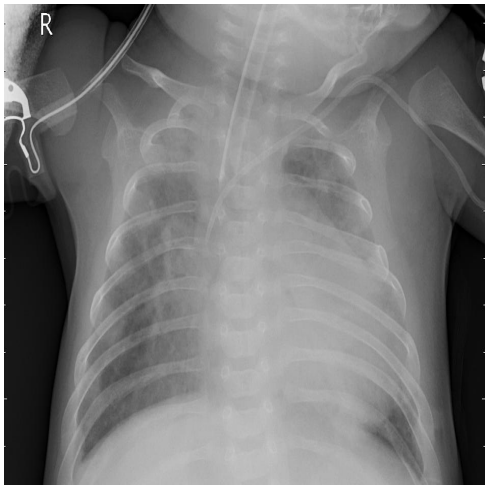

Chest X-Ray Pneumonia Screening System

Diagnostic Result:	**Pneumonia Detected**
Confidence Score:	95.2%
Status:	Review Required by Physician

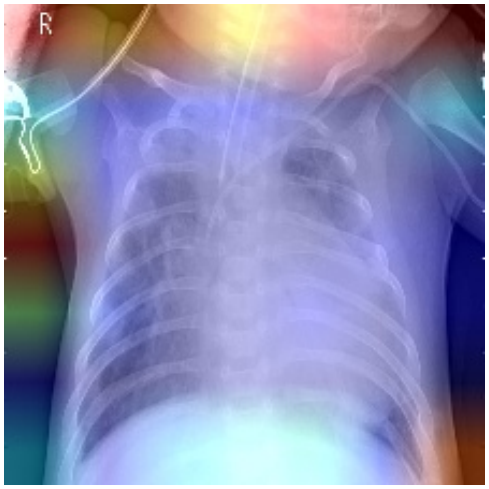

Clinical Image Analysis & Findings

The deep learning screening model analyzed the chest radiograph and identified patterns consistent with pulmonary infection (Pneumonia) with a high confidence score of **95.2%**. Visual inspection via Grad-CAM attention mapping highlights regions exhibiting diffuse opacities, infiltrates, or cellular exudate accumulation within the lung parenchyma. Immediate clinical correlation and physical examination are recommended.

Visual Scan Comparison (Original vs. Grad-CAM Heatmap)
